

Criterion E: Evaluation

Every aspect of the Success Criteria was tested by the client to ensure that functionality was included within the product.

Criteria	Evaluation
"Users should be limited to enter a set amount of characters per textbox"	Met: Users cannot input over 20 characters for the text boxes when the user inputs profile details.
"Logged in users should be able to add an item to filter and be able to sort by filters"	Met: Users can sort items by which ones they favoured.
"Showcase navigation – Ensure all screens and buttons are functional, consistent and smooth"	Met: All screens and buttons are working; all animations work successfully.
"Sign up & Login – Allows user to sign-up or log-in into the app with credentials"	Met: Users can create a new account, if they already made an account then they can login.
"Shop & Purchase – Allow user to place an order for a product on app"	Met: Users can add products to cart and then place an order
"User's name should show up on top of the app switcher if they are logged in"	Met: Users name show up on top of the app switcher, if they are logged in.
"Orders – Client should be able to view recent orders coming from both the app and the database website"	Met: If the admin is logged in, he can view orders that have been made. Otherwise it is accessible through the database website.
"Edit & Add Products – Admins should be able to edit and add new products to the shop"	Met: Admins are able to edit and add new products through the portal on the app.
"Only URL's should be accepted when adding an image to an existing product or new product"	Met: When an admin wants to add a photo to a product only certain URL's can be added.
"A preview of the image should show on the screen when a URL is added"	Met: Preview of the image is shown when URL is inputted by the admin.

Further Development:

When conducting the final client consultation (Appendix A) the client stated that they are satisfied with the final iteration of the product. Before handing over the product I provided the client with training on how the product works, this included showcasing the different menus and features included.

After completing the explanation, the product was handed to the client alongside a feedback survey (Appendix A). The feedback provided from the survey provided additional implementation for the product that would improve its functionality. The following key features is what would have increased functionality:

- The product should include a web interface to be able to see orders more easily, instead of the complicated UI of the database.
- The product should allow users to edit their personal information, for example their address
- The product should have a way for customers to be able to track their orders.

Other additional features that could have improved user experience of the application are: Being able to make payments within the application and users being able to see the stock of a certain product within the product page. Overall the product meets the success criteria provided by the client therefore the product being a viable solution for the client's problem.
